Built with

- **HTML5**
- **CSS**

What I learned

I have had to go back and review many lessons from weeks ago in order to make this project responsive. I think my confusion had to do with the flex system and confusing my columns and rows. I believe I picked up on what I should do in the future. Once that was figured out, the design and tweaks were fun.

Useful resources

- <https://developer.mozilla.org/en-US/> - MDN Web Docs is always a useful resource. Any time I have a question, this is the site I go to and I can usually get a grasp of what I was having a problem with.
- <https://www.freecodecamp.org> - Free Code Camp, also a great tool to look to when things just aren't lining up and the pieces just won't fit.
